PROFESSIONAL SUMMARY

Software engineer trained at AkiraChix CodeHive, with a background in mathematics and computer science, building secure and accessible digital tools with Python, FastAPI, PostgreSQL. Pairs simple screens with strong backend systems to make technology reliable for everyday communities. Seeking an innovative team to build high-impact, real world solutions.

PROJECT EXPERIENCE

FikaMarket Marketplace for small-scale farmers in Zambia | UI/UX Designer & Backend Developer

- Designed end-to-end flows for a farmer using USSD interface and a buyer using PWA/mobile app, using user research and usability testing to streamline checkout and produce listing.
- Built RESTful API endpoints using FastAPI, SQLAlchemy, and PostgreSQL to support the entire order lifecycle from listing to completion.
- Integrated Flutterwave for secure escrow payments, Africa's Talking for SMS/USSD, and LocationIQ/Positionstack for geolocation tracking.
- Secured endpoints using JWT authentication, Bcrypt hashing, and role-based access control (RBAC) with automated unauthorized access logging.
- Authored MkDocs developer documentation and collaborated in a cross-functional team using Git/GitHub, Jira, and Miro.

POS System Point of sale system that helps businesses manage and speed up their sales process | Backend Developer

- Built the backend that powers daily sales operations, with separate access levels for cashiers and administrators.
- Managed database schema changes safely with Alembic migrations and validated all request and response data with Pydantic models.
- Developed an automated Pytest and SQLite test suite covering CRUD operations, validation errors, and edge cases, and set up a GitHub Actions CI workflow to run it on every push and pull request.

House Pricing Prediction Machine learning project that predicts house prices from structural and regional features | Machine Learning Engineer

- Built and compared multiple regression models in Python with scikit-learn to improve accuracy and reduce prediction error.
- Cleaned the dataset, handled anomalies, and engineered features through exploratory data analysis with pandas.

Creative Platform Online platform for discovering local artists and booking creative sessions Backend Developer & QA Engineer

- Developed the discovery engine, artwork upload system, and personalized favorites list that connect visitors with local artists.
- Automated session booking and notification workflows to streamline communication between buyers and artists.
- Tested API endpoints with Postman to validate backend logic and data consistency across the platform.

WORK EXPERIENCE

Radiant Insurance Company, Gahanga Branch Branch Manager Assistant | August 2025 – February 2026

- Supported daily branch activities and customer service.
- Helped with client onboarding and sales activities.
- Communicated with customers and supported their needs.
- Assisted with general branch administration.
